The Opportunities of Engagement: Working with Scholars to Improve Description and Access at the Center for the History of Medicine

Emily R. Novak Gustainis, Center for the History of Medicine, Francis A. Countway Library of Medicine

Abstract: The Center for the History of Medicine has utilized its two CLIR-funded grant initiatives to engage researchers at all stages of their professional careers in an effort to understand how archival description can be improved or modified to the benefit of scholars while remaining attentive to workflows that speed processing. This paper considers findings from the Center’s Foundations of Public Health Policy (2008) and Private Practices, Public Health: Privacy-Aware Processing to Maximize Access to Health Collections (2012) initiatives.

As the Center for the History of Medicine’s Head of Collections Services, my day-to-day work focuses on the mechanisms of discovery: systems; standards; and practice. While I occasionally staff the reference desk, it requires advanced planning on my part to meaningfully interact with our researchers and find out if what we’re doing on the back end is meeting their needs. Researchers are our prime movers, the reason we kick the gears in to action and then examine the cogs, so it is no wonder user assessment is instrumental to trying out new ways to do our work. Over the past seven years, and through two CLIR grants, the Center has posed a number of questions to its constituents: How do you prefer to learn about collections? What makes a finding aid useful? What is the minimum amount of information you need to determine if a collection is worth your time? And most recently, how can we help improve access to records containing health information about individuals? These opportunities to engage fuel our data collection, both on our processes and our products.

I’ll say up front that there are only two ideas to take away from this paper, and I expect they are not revolutionary. One, repositories should increase the depth of description for collections
which have limited access, and two, that approaches to description should better recognize the needs of different disciplines. In my experience, our inclination as archivists is to provide much more description for open collections since they can be used right now, rather than on expending energy on helping our users make tough choices about whether or not to go through the process – when it is even possible – of appealing for access to unprocessed collections. Compounding this information gap is the urge to suppress catalog records for unprocessed, but held collections, thus eliminating the opportunity for researchers to even inquire about when records will open, and our missing valuable opportunities to gauge what is of user interest.

With the Center’s 2008 grant, *Foundations of Public Health Policy* and its 2012 *Private Practices, Public Health: Privacy-Aware Processing to Maximize Access to Health Collections*, which was proposed under the auspices of the Medical Heritage Library and conducted in partnership with the Alan Mason Chesney Medical Archives of the Johns Hopkins Medical Institutions, the Center had the opportunity to explore, respectively, the descriptive needs of a wide variety of researchers and those of medical and social historians needing access to records containing health information about individuals held by both HIPAA and non-HIPAA covered repositories. The results were polar opposites of one another.

For *Foundations of Public Health Policy*, the Center committed to building a community of interested public health practitioners, scholars, and students to support the acquisition and use of public health collections and to advise us on collections description and outreach. For descriptive assessment, this included recruiting 52 public health professionals, students, information
professionals, and historical researchers to evaluate the use of box and folder lists for the collections we were processing, those of public health and public health administration leaders Leona Baumgartner (1902-1991), Allan Macy Butler (1894-1986), Howard Hiatt (1925-), and David Rutstein (1909-1986). The box and folder lists were grouped by series and delivered online as spreadsheets through a take-home exercise and a post-exercise interview. Our objectives were to:

- assess how useful researchers found box and folder lists containing select metadata independent of any top-level descriptive information associated with a finding aid (such as biographical notes, subject access point, or series descriptions)
- ascertain whether or not researchers could perform routine information-seeking tasks associated with identifying materials of interest for research use with just a spreadsheet
- determine if a spreadsheet provided enough descriptive information to engender “trust” in the resource researchers were using. That is, were researchers comfortable with this resource alone as a determining factor to schedule a research visit.

Additionally, the scholarly engagement exercise and interviews were helpful to observing the obstacles MPLP (or at the Center, what we would consider ‘appropriate level’ processing) and other innovations may present to users. Participants, who were divided across the four collections processed for the project, were asked to complete an exercise consisting of both
general (quantitative) multiple choice questions and collection-specific, qualitative, questions regarding how they used two versions of an Excel spreadsheet to answer a number of questions. This included an “A” version spreadsheet with nine elements (box number, folder number, series, subseries, sub-subseries, folder title, begin date, end date, and in the case of Hiatt alone, access restrictions) and a “B” version with additional descriptive information provided in a notes field, such as to indicate the presence of photographs. The average completion time was one hour for the “take home” exercise, with the post-assignment interview averaging thirty minutes. In retrospect, it was a miracle we had fifty-two respondents, though we did need to eliminate some of the non-United States participant data due to differing interpretations of survey terminology. A sample user exercise is attached as Appendix A.

From our interviews, we gleaned the following:

- Participants agreed (by overwhelming consensus) that a spreadsheet was a good enough tool to make preliminary selections with regard to what to look at during a research visit, particularly in conjunction with a collection-level record available through HOLLIS, the online catalog of the Harvard University Library.

- Folder lists without contextual groupings (such as series or subseries) would have been less helpful to discovery. Comments from participants confirmed that folder titles can be “deceptive” on their own. Knowing that a folder named “Meetings with Jane, 1990” is
part of a series of teaching records or a series of patient files substantially changes a researcher’s interpretation of a folder title.

- Inexperienced researchers tended to want more descriptive information and preferred spending less time at a repository. Experienced researchers cared only about access. Moreover, experienced researchers stated that regardless of how an archivist handled a collection, they wanted to conduct their own records review. In other words, they were not going to take anyone’s word on what was in a collection or if it was relevant to their work.

- No one was concerned about subject access and only a handful of people mentioned an interest in having more contextual information (beyond groupings) or content-related information.

- Participants cared about record formats. Most liked the “B” version of the spreadsheet with the notes field because the occasional notes provided by processors indicated the presence of photographs or other non-textual items.

- Participants liked the idea of applying a minimal controlled vocabulary to a folder title (“qualifiers”) to help disambiguate folder transcriptions, such as “Writings” or “Correspondence.” However, multiple qualifiers would have to be employed; if you qualify a folder with “writings,” the implication is that the whole thing will be writings,
not writings intermixed with correspondence and reference material to support said writings. One individual thought indicating whether or not a preceding or succeeding folder that had a more descriptive title (such as activities) contained the same type of records as a vaguely titled folder.

- Unless archivists are going to provide a substantial number of folder-level scope and content notes, it doesn’t seem worth providing them at all. Most people did not think folders with notes were “more important,” and very few people assumed Center archivists were making “judgment calls” on content.

- While most researchers assumed the spreadsheet could be manipulated, they didn’t do so, such as to sort by date or add in columns. They scrolled and keyword searched the spreadsheets. For two collections, we provided one massive spreadsheet, and for two collections we provided folder lists tabbed out in Excel by series. The tabbed versions of spreadsheets ended up confusing a few participants, particularly those uncomfortable with Excel. Spending time on novel ways to use the spreadsheet was not of much interest.

- Thoughtful accessioning practices can facilitate access in advance of a full finding aid. Public Health processors roughly sorted the records into series and subseries in advance of box and folder listing. The more astute we are about doing this at the point of acquisition or accessioning, the faster we can enable meaningful access in lieu of “full” finding aids.
As a result of the grant, our then Acquisitions Archivist – and what is now our Acquisitions Team – spends much more time grouping and packing records up front and on-site with the donor when feasible. Because all acquisitions are listed in advance of being sent to off-site storage, the result is a higher quality collection inventory that is easier for Public Services staff to navigate and a resource that speeds processing planning. We are also far more comfortable allowing researcher access to unprocessed collections.

In 2012, the Center partnered with the Alan Mason Chesney Medical Archives of the Johns Hopkins Medical Institutions to process the papers of seven leaders in public health research and advocacy. The grant, *Private Practices, Public Health: Privacy-Aware Processing to Maximize Access to Health Collections*, addressed issues of access in both HIPAA and non--HIPAA covered entities, seeking best practices for archivists facing challenges and confusions over making health-related records in their collections available; specifically, to a) understand the informational needs of scholars seeking to use restricted records and what they consider most valuable to research; b) evaluate how language used by the Center and Hopkins to communicate restrictions in finding aids correlates with the perceived utility of the finding aid and the potential of the collection to satisfy a research need; and c) get feedback on the process for applying for access to collections with restricted records.

To do so, the Medical Heritage Library, represented by Center’s Kathryn Hammond Baker, Scott Podolsky, and Emily Novak Gustainis, and Hopkins’s Phoebe Evans Letocha, led discussion sessions, launched an online survey, presented at professional conferences, and ultimately distributed Novak Gustainis and Evans Letocha’s jointly authored, “Recommended Practices for
Enabling Access to Manuscript and Archival Collections Containing Health Information about Individuals to the research and professional communities for feedback. While this engagement work was underway, Center and Hopkins staff were simultaneously processing collections, with the Center’s collections being the papers of Oliver Cope (1902-1994), Stephen W. Lagakos (1946-2009), Erich Lindemann (1900-1974), and Arnold S. Relman (1923-2014), as well as the records of the Harvard School of Public Health’s Department of Biostatistics, 1981-2009 (inclusive).

Efforts included:

- A SurveyMonkey survey (Appendix B) on access to health records (“Research Access to Protected Records Containing Health Information about Individuals”) was distributed to the Medical Heritage Library governance committee and circulated to professional and discipline-directed listservs. In total, sixty-three people responded. Data obtained as a result of the survey was analyzed for engendering discussions between archivists and historians and informing the creation of the “Recommended Practices” document. (Survey data is available online at http://www.medicalheritage.org/wpcontent/uploads/2010/06/Data_All_140424_nocontact.pdf.)

- A workshop for Harvard University’s History of Medicine Working Group, comprised of graduate students and faculty from the History of Science Department, which included an
interactive review of finding aids for collections containing restricted records and a
discussion of the type of descriptive content researchers might need to evaluate the
usefulness of the records for research.

• A lunch workshop at the 2014 annual meeting of the American Association of the History
of Medicine (AAHM), which served to elicit the information historians need to determine
whether or not it is worth applying to an Internal Review Board (IRB), what information
is most useful to them, and what they feel is missing from finding aids. As part of the
session, historians Janet Golden, Rutgers University, and Cynthia Connolly, University of
Pennsylvania, shared with the audience their research experiences and difficulties using
patient records to inform their research and launched a discussion of how to improve the
user experience. (For slides, see: http://www.medicalheritage.org/announcements-and-
articles/ under “Presentations.”)

• A presentation at the 2014 Annual Meeting of the Society of American Archivists in
Washington, D.C. The session, “Partners in Practice: Archivists and Researchers
Collaboratively Improving Access to Health Collections,” offered perspectives of both
historians/researchers and archivists on the importance of making a wide variety of
records that contain health information about individuals discoverable. The session was
moderated by Susan Lawrence (Ohio State University) and included a presentation by
(Slides may be found online at http://www.medicalheritage.org/announcements-and-
As a result of these efforts, it became clear that because of the complexities related to applying for access to records containing health information about individuals—whether closed either to comply with HIPAA, state law, or institutional policy—different kinds of descriptors were necessary. When survey participants were asked whether or not they could apply to a Review Board to obtain access, only 56.14% (32) had access to a review board, and of the 32 individuals who did have access, only 56.25% (18) actually went through the process. Respondents said it took too much time—especially when they found out about the restrictions when they were already on-site, weren’t convinced they’d actually get access if they went through the process, or felt that they lacked support or guidance. Respondents stated that the most significant barrier to using records containing confidential/protected health information held by special collections, archives, and museums, was lack of information about the records themselves and access procedures, stating, “I see records that look interesting in catalogs or collection guides, but I can't tell if they will be useful” and “The process takes too long.”

Researchers simply needed more information to help them make decisions. As professionals, we can’t control what the Internal Review Board or Access Board applications require or how frequently they meet, but we can provide more description. Offering samples of variables found in the records (like patient diagnosis or condition, the age, sex, and race of patients, and the types of medications or procedures) can make a world of difference, as can better indicating the kinds of records in a collection (patient histories vs. case files vs. medical records, rather than just “patient records”) and providing more explicit statements at the folder level indicating why the
folder is restricted and for how long. For example, all Center finding aids authored for the grant include descriptive information about the type of restrictions found in the collections, why those restrictions have been imposed, and how access to records may be obtained. At the folder level, the Center provided a transcription of the full folder title (redacting patient names), the year the records in the folder will open to the public, and a qualifying description in the form of a folder-level scope note to convey the intellectual contents of the folder without revealing protected information. Because the Center is a non-HIPAA covered entity, access restrictions were determined by sampling the content of records in each folder. Hopkins, a HIPAA covered-entity has a similar descriptive approach, except Hopkins staff must screen documents at the item level for protected health information. Readers are encouraged to review the paper *The Practice of Privacy* by Phoebe Evans Letocha, Monica L. Mercado, and Novak Gustainis for more detailed information about the descriptive process, a paper that was also prepared for the 2015 *Cataloging Hidden Special Collections and Archives Symposium: Innovation, Collaboration, and Models*.

So how do we balance the needs of users who are seemingly satisfied with a structured box and folder list on one side of the continuum and those that want the kind of information that can only be gleaned by labor intensive sampling? Perhaps it is the case that for public health and other to-be-determined collections with little or no patient records that we scale back on descriptive processes, letting the collections do the talking while we ramp up efforts to describe records that do not easily present. Those of us in a special collections environment can also become more comfortable describing boxes of access-protected records only at the container or series level, focusing on the records that comprise a series more holistically. Flexible and appropriately
applied approaches to processing can only be built through concerted efforts to understand the needs of our multiple constituencies. The Center is now testing the best practices developed for the description of collections containing health information about individuals on the Dwight E. Harken papers, 1930s-1990s, and should be completed concurrent to the symposium. We look forward to sharing the finding aid with members of community for feedback.
APPENDIX A:  

**Center for the History of Medicine**  
User Study, 2009-2010

**Introduction**
As part of its Foundations in Public Health Policy grant work, the Center for the History of Medicine, Countway Library, is conducting a study to document and analyze how researchers use and respond to different access tools developed for delivering information about its collections to the public. This grant, as funded by the Andrew W. Mellon Foundation and administered by the Council on Library and Information Resources (CLIR), has enabled the Center to experiment with ways to make collections available to researchers over shorter periods of time. Your participation in this study will help us determine the efficacy and utility of these tools.

The study consists of two parts:

1. An exercise consisting of both multiple choice survey questions and detailed questions designed to assess how participants use two different versions of a spreadsheet to answer questions about a collection. *We estimate that it will take about one hour to complete the study exercise.*

2. An interview (either at the Center or via conference call) that will focus on content and usability issues related to how you used the spreadsheets to complete the exercise. *We estimate the interview to take between thirty minutes and one hour.*

We sincerely appreciate your taking the time to participate and provide feedback. We are happy to answer any questions you might have about the project. Please contact Michael Dello Iacono, Project Archivist, [MPD13@hms.harvard.edu](mailto:MPD13@hms.harvard.edu), and Emily R. Novak Gustainis, Collections Services Archivist, [ERN6@hms.harvard.edu](mailto:ERN6@hms.harvard.edu).
A. **Introductory Questions**

1. **How would you identify yourself?**
   - ___ A new/inexperienced researcher who has not used many archival or manuscript collections
   - ___ An experienced researcher who has visited a number of archives and used a number of archival or manuscript collections
   - ___ A person in the Public Health Field new to archival research
   - ___ A person in the Public Health Field who is an experienced researcher
   - ___ An information professional (librarian, archivist, metadata specialist, etc.)

2. **How comfortable are you conducting research online and using electronic resources?**

<p>| | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
</tr>
<tr>
<td>Very uncomfortable</td>
<td></td>
<td></td>
<td>Very comfortable</td>
<td></td>
</tr>
</tbody>
</table>

3. **How many archives have you visited in the last three years to conduct primary research?**
   - a) 0 repositories
   - b) 1-5 repositories
   - c) 6-10 repositories
   - d) More than 10

4. **Have you been unable to use a collection at a repository because it was unavailable for research use (or was “unprocessed”)?** (Please circle)
   - Yes
   - No

5. **If so, how many times during the last three years?**

   - __________

6. **Which statement best reflects how you feel about the amount of time an archives or special library takes to provide public access to a new collection you are interested in using?**

   - a) I would rather have a repository provide access to a collection (or part of a collection) that has been minimally reviewed for research use (for example, only has a box list) so long as the collection is made available to the public as soon as possible.
b) I would rather wait until a collection has been well organized and thoroughly documented for optimal research use, even though it may take longer for the repository to make it available to the public.

7. **Which is more important to you?**

   a) Being able to spend less time at a repository because I have very detailed information about a collection and know exactly what to have pulled for me, even if it means I might not be able to access a collection in the immediate future while this type of information is being collected.

   b) Having access to a collection, even if it means I may need to spend a lot of time at a repository searching for the information I want.

8A. **If you could only have ONE of the following discovery tools, which would you rather have available to you online and in ADVANCE of your visiting the Center for the History of Medicine?**

   a) A detailed summary of a collection’s content, biographical/institutional information about the creator(s) of the collection, and information about what kinds of documents are in the collection, including date spans for all materials.

   b) A spreadsheet containing a list of every folder “title” in every box of the collection as it was originally labeled by the person who created or assembled the collection.

8B: **Why did you pick A or B?**

9. **Which is more important to you?**

   a) Being able to simultaneously search for subjects or people across many finding aids in order to discover which collections at a particular repository may help me with my research.

   b) Being able to print an inventory for, or guide to, a collection for personal reference use from a list of collections posted on a repository’s website.
B. Spreadsheet-Specific Questions

Part B-I
To complete Part B-I, please copy and paste the following location into your web browser:
http://repository.countway.harvard.edu/xmlui/handle/10473/3600

Under “Sample Submissions,” select the file:
CLIR_baumgartner_boxlist_A.xls

Under “Associated Files,” click on “View/Open” for the file:
CLIR_baumgartner_boxlist_A.xls

Please take a few minutes to look at the spreadsheet and then answer the following questions. Please feel free to cut and paste answers from the spreadsheet into this Word document.

1. What are the five major groups of records found in the collection?

2. Pick two of the groups you identified in question 1. What kinds of information would you expect to be in these groups of records?

3. What types of materials would you expect to find in the collection?

4. Why?

5. In what year did Baumgartner travel to Russia?

6. Please name two of Baumgartner’s published articles from the 1950s.

7. What steps did you take to answer to questions 5 and 6?
8. How much material is there in the collection related to speeches given by Baumgartner?

9. What steps did you take to answer question 8?

10. If you were looking for letters between Baumgartner and her family members, where would you expect to find them?

11. Please list three individuals Baumgartner corresponded with.

12. From 1954-1962, Leona Baumgartner served as Commissioner of Public Health for the city of New York. Where would you look for records in the collection that relate to Baumgartner’s public appearances as Commissioner?

13. You are researching the activities of the American Public Health Association (APHA) in the 1950s and 1960s. Which boxes would you ask to see?

14. How would you find out if there were items from the 1970s?

15. How would you determine how much material from the 1970s is in Series 4?

16. Did you need to print the spreadsheet in order to answer the above questions?

17. Did you save the spreadsheet to your desktop or local drive before working on the questions?
Part B-II
To complete Part B-II, please copy and paste the following location into your web browser: http://repository.countway.harvard.edu/xmlui/handle/10473/3600

Under “Sample Submissions,” select the file: CLIR_baumgartner_boxlist_B.xls
Under “Associated Files,” click on “View/Open” for the file CLIR_baumgartner_boxlist_B.xls

Please take a few minutes to look at the spreadsheet and then answer the following questions. Please feel free to cut and paste answers from the spreadsheet into this Word document

1. Summarize the kind of information provided in the “Notes” column.

2. What types of materials would you expect to find in the collection?

3. Baumgartner delivered many speeches and lectures throughout her career. Please name two people who delivered a talk along with Dr. Baumgartner.

4. Please explain how you found the above answer.

5. Do folders with notes in the “Notes” column contain more important documents?

6. Please list the question numbers in section B-I that you would now answer differently having seen the “Notes” column.
APPENDIX B: Private Practices, Public Health Survey (2012)

Survey on Research Access to Protected Records Containing Health

About the survey

This survey is being conducted by the Center for the History of Medicine, Francois A. Countway Library of Medicine, and the Alan Mason Chesney Medical Archives of the Johns Hopkins Medical Institutions as part of a joint effort to develop best practices for enabling access to special collections containing protected health information (PHI) and other types of access-protected ("restricted") records. For the purposes of this survey, health information (protected or otherwise) is defined according to the HIPAA Privacy Rule (1996) as:

"Information, including demographic information, which relates to: 1) an individual's past, present, or future physical or mental health or condition, 2) the provision of health care to the individual, OR 3) the past, present, or future payment for the provision of health care to the individual, AND that identifies the individual or for which there is a reasonable basis to believe can be used to identify the individual. Protected health information includes many common identifiers (e.g., name, address, birth date, Social Security Number) when they can be associated with the health information listed above."

For example, per HIPAA, a medical record, laboratory report, or hospital bill would be PHI because each document would contain a patient's name and/or other identifying information associated with the health data content.

By responding to this survey, you are helping libraries and archives improve how they describe records and make hidden collections available to researchers in more useful ways.

Thank you!

Finding aids and access

1. Have you used manuscript collections or archival records as part of your research?
   - Yes
   - No

2. If yes, have you used a collection guide ("finding aid") that included information about whether or not patient or other health-related records in the collection had access restrictions?
   - Yes
   - No

3. How have you learned about the presence of restricted records for the majority of the collections you have used (or were interested) in using?
   - A librarian or archivist
   - Online using a finding aid
   - Online using a library catalog record
   - Other (please specify)
Survey on Research Access to Protected Records Containing Health

4. What are the kinds of records you were interested in using, but were restricted? Check all that most often apply:
   - Medical records and indices (whether patient, diagnostic, or other) maintained by a healthcare provider, such as a hospital or medical practice
   - Medical imaging records, such as x-rays
   - Photographs of patients
   - Psychiatric or other mental health-related records, such as psychotherapy notes
   - Research records (such as datasets, human subject research information, etc.) that contain personally identifiable information ("personal identifiers"), such as names, addresses, phone numbers, medical records numbers, etc.
   - Other (please specify):

Use of IRB

5. Was submitting a request to an Internal Review Board (IRB) to use the records a possibility?
   - Yes
   - No

6. If yes, did you end up submitting an IRB to access the records you were interested in using?
   - Yes
   - No

7. If no, why not?

Barriers to use
8. What do you think is the most significant barrier to your use of records containing confidential/protected health information held by special collections, archives, and museums?

☐ The IRB process takes too long
☐ Too much paperwork is required to get access to restricted records
☐ I see records that look interesting in catalogs or collection guides, but I can’t tell if they will be useful
☐ Nothing is digitized
☐ Repositories aren’t open when I have time to do my research
☐ I don’t think I’ll be able to quote, reference, or use the records in publications
☐ No one will tell me if I can use the records or not
☐ This does not apply to me. There are no barriers to my use of records

Other (please specify)

9. What descriptive information do you think is missing from library catalog records or collection guides (such as those for a manuscript collection)? What information would be most useful to you in deciding whether or not a collection has information relevant to your research?
